Introduction.

In this document we shall take a look at how to setup this website and how to get started. First we shall take a look at how to setup an “Apache server” plus a “MySQL server”. After that we will take a look at how to setup the required “Node server”.

This might seem overwhelming at the moment but it will get clearer the more you dive in this manual. Nevertheless let's get started!

Setup a Apache + MYSQL server.

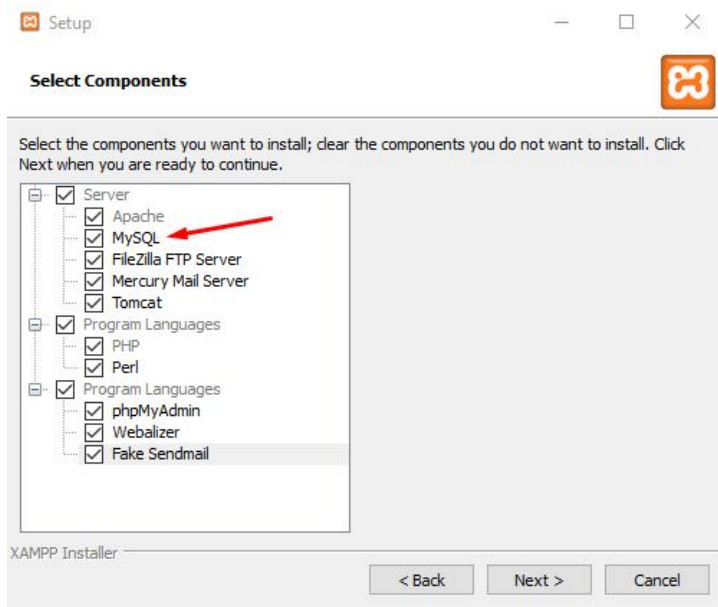

Head to XAMPP.org on that page select the operating system that you are currently running on.

The screenshot shows the XAMPP website homepage. At the top is a navigation bar with links: Apache Friends, Download, Add-ons, Hosting, Community, About, a search bar, and a language selector (EN). The main heading is "XAMPP Apache + MariaDB + PHP + Perl". Below this, there is a section titled "What is XAMPP?" which describes XAMPP as a popular PHP development environment. To the right of this text is a video player titled "Introduction to XAMPP" showing the XAMPP logo. Below the "What is XAMPP?" section, there are three download buttons: "Download" (with a link to other versions), "XAMPP for Windows 7.3.0 (PHP 7.3.0)", "XAMPP for Linux 7.3.0 (PHP 7.3.0)", and "XAMPP for OS X XAMPP-VM (PHP 7.3.0)". Red arrows point to each of these three download buttons. At the bottom of the page, there is a green banner that says "New XAMPP-VM for OS X available!" with a "Try it now" link.

When downloaded open the installer and follow the steps the installer gives you, Xampp is a great piece of software because MYSQL is included so we don't have to install it again later.

Make sure it is selected in the setup shown by the picture below.

If you don't have any errors then we can head to the next step, installing the "Node server"

Installing the “Node server”

Head to [NodeJs.org](https://nodejs.org) and download the recommended Node.js server.

Node.js® is a JavaScript runtime built on Chrome's V8 JavaScript engine.

Download for Windows (x64)

10.15.0 LTS

Recommended For Most Users

11.6.0 Current

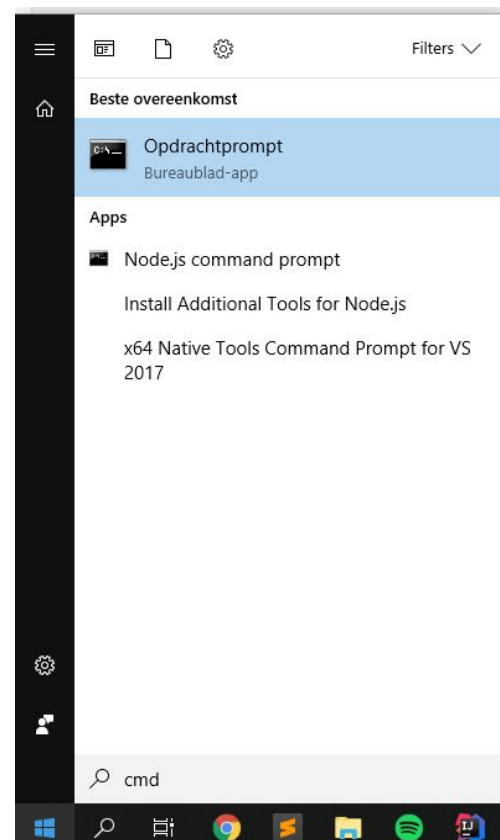

Latest Features

[Other Downloads](#) | [Changelog](#) | [API Docs](#) [Other Downloads](#) | [Changelog](#) | [API Docs](#)

Or have a look at the [Long Term Support \(LTS\) schedule](#).

Sign up for [Node.js Everywhere](#), the official Node.js Monthly Newsletter.

Open the installer and follow the steps the installer gives you. Once installed open your “command prompt” on windows you can find this by pressing the windows key and typing “CMD”

For mac is this the “Terminal”, you can find this by opening the utilities folder and typing “terminal”

Type Node in your terminal/CMD and it should prompt a Node instance.

```
Opdrachtprompt - node
Microsoft Windows [Version 10.0.17134.523]
(c) 2018 Microsoft Corporation. Alle rechten voorbehouden.
C:\Users\auke>node
> _
```

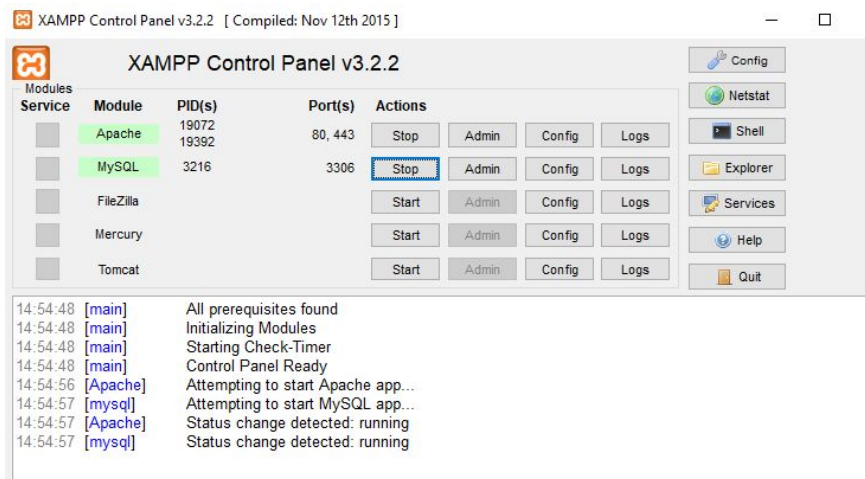

This is a local Node server you can create variables and run files and all types of other things. But we are not going to that in this manual. All we need to do here is “npm install” in the server folder so all the npm packages get installed.

```
fys\server>npm install
```

Setting up the website

Now we are going to setup the website grab your TravelBuddies.zip and move it to this directory. C:/Xampp/htdocs (The C: depends on where you installed it). unzip the file and you are nearly ready to go!

Open up your xampp and start the apache, mysql service shown here.

The website should run fine, but we need the node server running as well. Open up that Terminal/CMD and move to the location of server.js. We can do this via the “CD” method shown in the picture below.

```
C:\>cd ./xampp/htdocs/TravelBuddies/server_
```

Once you are in the server directory type

```
C:\>node server_
```

You should see this

```
Listening to port 1337
```

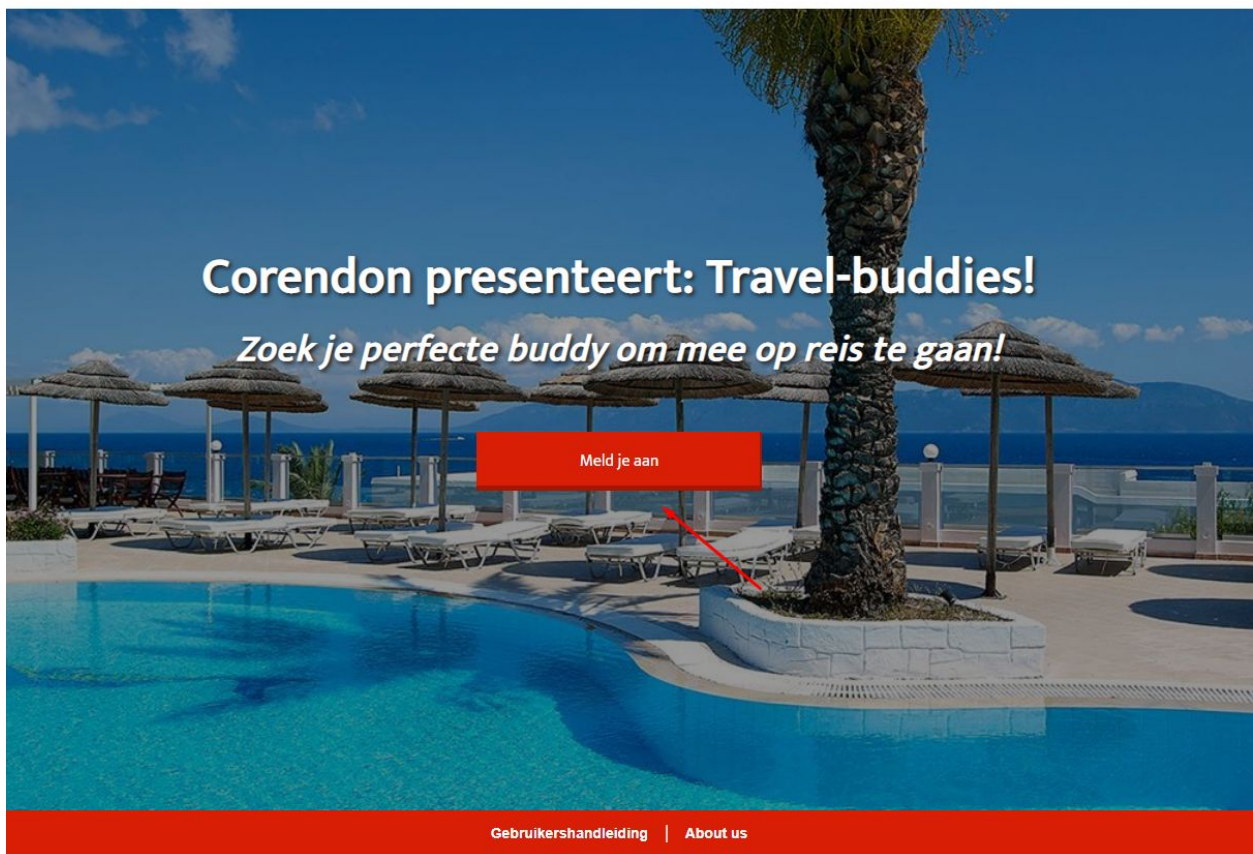

If you see that your website is online and ready to go! if not try to redo the steps above. Now let's make an account and start matching!

Setting up an account

Alright open up your browser and type “localhost” in your url bar. and move to client/index.html. If correct you should see the homepage of the website. Press the “Meld je aan” button to make an account!
